Role-Specific Portfolio: zohairomar.netlify.app/for/atco/data-analyst

Summary

4th Year Computer Science & Mathematics student @ UofC (transferred from UBC) with a Minor in Economics; **GPA: 3.4**. Hands-on experience across the **end-to-end data lifecycle**: ingestion, transformation, validation, documentation, and consumption. Built data pipelines in **Python and SQL**, designed **Power BI** dashboards with full **data lineage and data dictionary** documentation, and shipped automated validation across multi-year operational datasets. Enrolled in Co-op at the University of Calgary; open to a 12-month term in Edmonton starting September 2026. Valid Class 5 Driver's License – Alberta.

Technical Skills

Languages: SQL (primary), Python (Pandas, NumPy, statsmodels), R, JavaScript, TypeScript, Java

Data & Analytics: ETL/ELT pipelines, data profiling, data validation, schema checks, anomaly detection, data lineage, data dictionary, data modeling

BI & Visualization: Power BI (DAX, Power Query), Excel (Pivot Tables, VLOOKUP, modeling), Tableau, Plotly, Streamlit

Databases & Cloud: SQL Server, PostgreSQL, MySQL (Google Cloud), database design, data warehouse concepts, lakehouse concepts

Tools & Documentation: Git, GitHub Actions, Docker, Linux, Jupyter, Microsoft Graph API, SharePoint, run-books, wikis, SOPs

Education

Bachelor of Science, Computer Science & Mathematics (Minor in Economics) Expected Apr 2027
University of Calgary, Alberta

Bachelor of Science, Computer Science Sep 2022 – Sep 2024
University of British Columbia, Vancouver

Relevant Coursework: Applied Machine Learning (Python), Introduction to Data Science (R), Statistics, Software Engineering, Computer Applications in Economics (Excel modeling), Microeconomics, Macroeconomics

Experience

Enactus UCalgary – WealthPath Jul 2025 – Present
Calgary, AB

Front-End Development Lead; React, TypeScript, Google Cloud MySQL

- Connected the React frontend to a **Google Cloud MySQL** backend; set up REST API documentation and coordinated with the back-end team to define API contracts and data validation rules.
- Led a 4-person Agile team through weekly sprints; used Microsoft Teams, Word, and PowerPoint for sprint documentation and stakeholder presentations to non-technical leadership.

TechNova Feb 2025 – Present
Calgary, AB

Co-Founder & VP Technical; Python, SQL, Power BI

- Translated business questions** from non-technical stakeholders into clear analysis requirements and deliverables; built data analysis tools and Power BI dashboards for **100+ users**.
- Created **starter queries and how-to guides** for client teams to adopt reporting tools; explained technical findings in business-friendly language.

Agrius IT May 2024 – Jul 2024
Abu Dhabi, UAE

Software Developer Intern; Python, SQL, HTML/CSS, JavaScript

- Investigated and triaged **data quality issues** on an enterprise platform serving **1,000+ daily users**; documented workflows and SOPs; resolved three critical bottlenecks ahead of schedule.

Projects

Oil & Gas Asset Integrity Dashboard; Power BI, DAX, Power Query, SQL Server, SharePoint

- Built a **Power BI dashboard** simulating asset integrity monitoring for natural gas infrastructure across 24 months of simulated operational data; traced full **data lineage** from source systems to stakeholder reports and created a **data dictionary** with standardized naming conventions.
- Modeled data with DAX and Power Query; implemented role-based views and **validated outputs against expected business rules** for management reporting.
- Documented **business logic, assumptions, and usage guidance** for stakeholders; deployed to SharePoint with scheduled refresh.

Production Analytics Pipeline & Forecasting Dashboard; Python, Pandas, statsmodels, Azure AD

- Built an **ETL pipeline** on multi-year operational data (7 wells, 2008–2016) with **data profiling and validation** (schema checks, anomaly detection via rolling z-score, completeness checks); logged validation results for triage.
- Refactored nested loops into **vectorized Pandas operations**, cutting runtime by **35%**; built ETS forecasting with rolling-origin backtesting and MAE/RMSE/MAPE/WAPE error metrics.

Heart Disease Prediction Model; R, tidyverse

- Built a **classification model (KNN)** on 300+ patient records with data cleaning, feature scaling, and statistical analysis; visualized feature impact for non-technical audiences with documented assumptions.
