Role-Specific Portfolio: zohairomar.netlify.app/for/atco/it-analyst-rubix

Summary

4th Year Computer Science & Mathematics student @ UofC (transferred from UBC) with a Minor in Economics; **GPA: 3.4**. Hands-on experience in **business analysis, IT operations, incident response, and QA testing**: built a full-stack **Incident Management Platform** with release pipelines and 99 automated tests, designed Power BI dashboards for natural gas operational reporting, and co-founded a technology consulting club. Comfortable with Python, SQL, Power BI, ERD design, and shifting priorities across cross-functional teams. **Based in Calgary** (no relocation needed); enrolled in Co-op at UofC, open to the 12-month term starting September 2026. Valid Class 5 Driver's License – Alberta.

Technical Skills

Languages & Scripting: Python (Pandas, NumPy), SQL, PowerShell, Bash, Java, JavaScript, TypeScript, R
IT Analysis & BA: Requirements gathering, business process documentation, ERD diagrams, system event log review, SOPs, runbooks, ad-hoc queries

QA & Release: Unit testing, integration testing, test scenario design, CI/CD, release management, deployment plans, code review

BI & Visualization: Power BI (DAX, Power Query), Excel (Pivot Tables, VLOOKUP, modeling), Plotly, Streamlit

Databases & DevOps: SQL Server, PostgreSQL, MySQL (Google Cloud), Git, GitHub Actions, Jenkins, Docker, Linux, Power Automate, Azure AD

Education

Bachelor of Science, Computer Science & Mathematics (Minor in Economics) Expected Apr 2027
University of Calgary, Alberta

Bachelor of Science, Computer Science Sep 2022 – Sep 2024
University of British Columbia, Vancouver

Relevant Coursework: Software Engineering, Object-Oriented Programming (UML), Data Structures & Algorithms, Applied Machine Learning, Statistics, Computer Applications in Economics (Excel modeling), Microeconomics

Experience

TechNova Feb 2025 – Present
Calgary, AB

Co-Founder & VP Technical; Python, SQL, Power BI

- **Co-founded** a technology consulting club from scratch (entrepreneurial mindset, results-oriented); managed 4 developers across **concurrent client engagements** while balancing academic coursework and **shifting priorities**.
- Ran **client intake sessions** to gather business requirements; translated rough ideas into scoped technical plans, bi-weekly status updates, and handoff documentation; supported ad-hoc data queries and reporting for non-technical stakeholders.

Enactus UCalgary – WealthPath Jul 2025 – Present
Calgary, AB

Front-End Development Lead; React, TypeScript, GitHub Actions

- Led a 4-person Agile team on a financial platform; implemented **release management** and CI/CD across **30+** merges with automated testing and code review.
- Set up REST API documentation and connected the React frontend to a **Google Cloud MySQL** backend; coordinated cross-functionally with the back-end team to define API contracts and resolve integration issues.

Agrius IT May 2024 – Jul 2024
Abu Dhabi, UAE

Software Developer Intern; Python, SQL, HTML/CSS, JavaScript

- Monitored **system event logs** and triaged incidents on an enterprise platform serving **1,000+ daily users**; resolved three critical bottlenecks ahead of schedule; produced **SOPs and process documentation** for cross-functional handoff with operations and business teams.

Projects

Incident Management Platform; Java, PostgreSQL, GitHub Actions, Jenkins, Docker

- Built a full-stack **incident management and release** platform covering ticket tracking, status updates, and post-incident documentation; designed **ERD diagrams** and relational schemas in PostgreSQL with role-based access control.
- Shipped **99 unit and integration tests** with test scenario design and coverage analysis to prevent regressions before production deployment.
- Built CI/CD pipelines using **GitHub Actions, Jenkins, and Docker** for automated build, test, and deployment; participated in walkthrough reviews for release readiness.

Oil & Gas Asset Integrity Dashboard; Power BI, DAX, Power Query, SQL Server, SharePoint

- Built a **Power BI dashboard** simulating asset integrity monitoring for **natural gas infrastructure** across 24 months of simulated operational data; modeled with DAX and Power Query.
- Documented full **data lineage, business logic, and assumptions**; deployed to SharePoint with scheduled refresh and role-based views for management reporting.

Production Analytics Pipeline; Python, Pandas, statsmodels, Power Automate, Azure AD

- Built an ETL pipeline with **data validation** (schema checks, anomaly detection, completeness checks); refactored nested loops into **vectorized Pandas**, cutting runtime by 35%.
